

What Your Colleagues Say about the *Early Developmental Screening and Intervention* Learning Collaborative

Learn from National Experts!

This Collaborative features national and local leaders in primary care pediatrics and quality improvement, including:

Peter Margolis, MD
Marian Earls, MD
Laura Mabie, MD
Brian Prestwich, MD
Marc Lerner, MD

How to Learn More:

1) Join an Informational Call

Learn details and ask questions!

February 3, 12:30 – 1:15 pm

February 16, 12:30 – 1:15 pm

Call Number: 1-888-921-8686

Passcode: 103-100-1045

2) Talk to Chapter 2 EDSI Co-Directors

Email Chapter2@aap-ca.org to schedule an individual call.

Apply By February 22:

In-person Learning Session:

Friday April 2 8:30 am - 4:30 pm

Saturday April 3 8:30 am - 1:00 pm

"Now the physicians in our private practice know how to make a change. We were so entrenched in the daily routine that we didn't know how to do that. This makes us feel that we're more in charge of our practice."

Laurie Mabie, MD

"The clinician fear of the open-ended 'do you have any concerns' questions has proven unfounded. In fact, the question is capturing the 'doorknob' questions and helping the flow of the encounter."

Brian Prestwich, MD

"Some federal health insurance programs for children are adding developmental screening as a required quality measure. This collaborative gets doctors ready for this change."

Glenn Takata, MD

"Our improvements are bringing more parents with young children to our community clinic. We have changed conversations with parents because we are now talking about development and are consistent from parent to parent. Patients say this is cool and have never seen it done before. They are telling their friends about us."

Family Medicine physician in 2009 Collaborative

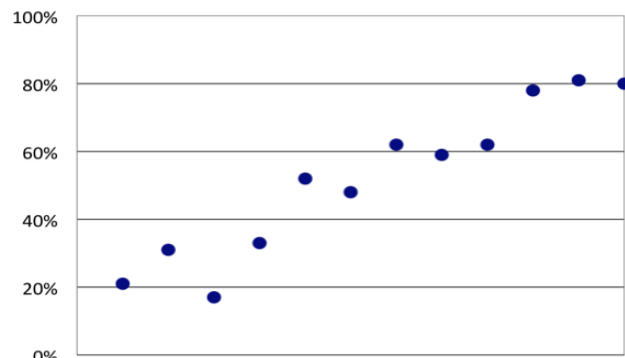

"I often find that children's skills are behind because they haven't had the opportunity, not because they are actually delayed. Now I have a more systematic way of guiding parents on things to do with their children and then re-screening later."

Pediatrician in 2009 Collaborative

"Any strategy that requires more work by the doctors will not be sustainable. Having implemented the EDSI strategies, I can say from experience that this honors that rule."
